

Finally, I.V. Sedation in Your Office, at Your Convenience.

When Nitrous Oxide and Oral Cocktails Just Aren't Enough—Consider These Benefits:

Convenient: I come to your office so you and your patients don't have to go anywhere else. No need for referrals or outside facilities.

Safe: Your patients are fully monitored. A defibrillator and all the necessary emergency medications including dantrolene are immediately available.

Cost Effective: Your patients save the expense of a separate facility.

Few Age Restrictions: I can work with children as young as two years old.

No Need to Purchase Equipment: I have all the agents and equipment needed for doing sedation in any office.

Not Just for Kansas City: Don't assume you're too far away. Give me a call, I'm willing to travel.

Dr. Christopher Mina, MD, Board Certified anesthesiologist specializing in anesthesia and sedation for medical and dental offices.

Anesthesiology for Offices

“For our special patients who require I.V. sedation, Dr. Mina enables us to provide treatment right in our office setting. Parents of young children especially appreciate having treatment in a familiar environment, with much less expense than hospitalization.

I also appreciate the wonderful way in which Dr. Mina interacts with my patients. His service contributes a great deal to our patients experiencing a positive dental visit.”

– Dr. Grant D. Ringler, DDS, Hutchinson, Kansas
